

DESIGN: REDESIGN

Pil-low sofa-bed design is based on a specific relationship between seat, back and pillow in which pillow takes double function - while at sofa position it improves seating ergonomics, in bed position it serves for sleeping area width enlargement. Common decorative pillows which are placed and used to improve comfort are no longer necessary. Innovative tilting mechanism was designed to enable easy one hand sofa-bed transformation. In the first stage of opening, initially completely invisible storage space becomes available. Outer shape is designed to perform equally well in various settings, as a freestanding sofa or with backrest next to a wall.

STRUCTURE	solid wood, multilayer plywood
SUSPENSION	horizontal wave springs
SEAT	HR foam, polyester wadding
BACKREST	HR foam, polyester wadding
BASE	metal
FINISH	powder coated matte
UPHOLSTERY	fabric
MATTRESS TYPE	HR foam
